

IMMERSIVE EXPERIENCES TO RESET, REGULATE & THRIVE

Every classroom includes learners who may feel overwhelmed by noise, movement, or emotion. Some struggle to regulate in the moment. Others need calm or focus before learning can begin. Educators see this every day, but providing meaningful support for individual needs without disrupting learning for everyone else isn't always easy.

What is EduverseTHRIVE?

A complete wellbeing and inclusion solution designed to support:

Emotional Regulation

Sensory Needs

Readiness To Learn

What's Included?

A dedicated set of 4 or 8 ClassVR headsets for in-class support.

Purpose-built immersive content library for regulation and wellbeing.

Educator-led control, ensuring use is intentional and appropriate.

Flexible experiences to support different sensory and emotional needs.

In comparison to traditional school sensory spaces, EduverseTHRIVE puts individualised support directly in the classroom. Every headset means access at the point of need - no booking, sharing, or timetabling required. This enables schools to respond to regulation needs as they arise, without removing learners from class or interrupting learning for others.

The result is practical, inclusive support that fits naturally into the flow of the school day.

A Content Library Designed Around Real Needs

EduverseTHRIVE includes four focused content suites, giving educators flexible ways to support different sensory, emotional, and social needs without labels or assumptions.

MYTHRIVE

A personal virtual space to reset, regulate and return to learn.

BUILDING EMPATHY

Immersive experiences that grow empathy and understanding.

SENSORY SUPPORT

Balanced sensory experiences, ready when learners need them.

LIFESKILLS

Real-world experiences that build understanding, confidence, and inclusion.

Educators can also upload their own 360° images or videos, allowing learners to access familiar, personally meaningful environments that support regulation and readiness to learn.

How Virtual Reality Supports Regulation

VR enables educators to control sensory input, reducing visual and auditory overwhelm, creating calm, predictable environments for regulation. Immersive VR provides a level of sensory control and environmental consistency that no other classroom tool can replicate. This makes it a uniquely effective tool for supporting learners in moments when the classroom feels too much.

Support at the Moment It's Needed

EduverseTHRIVE is not a specialist add-on or a one-off intervention. It's a dedicated classroom solution that makes inclusive practice possible every day, offering support that feel calm, private, and empowering, so students can feel safe, regulated, and ready to learn.

Why schools choose EduverseTHRIVE

- 1 Supports regulation, wellbeing, empathy, and life skills all within the classroom.
- 2 Reduces disruption while meeting individual needs.
- 3 Complements SEND, ASN, and whole-school wellbeing strategies.
- 4 No physical sensory rooms or additional space required.
- 5 Designed for everyday use - not occasional intervention.
